

Insulated cargo covers built to protect pharmaceuticals, biomaterials and other temperature-sensitive products during air transit.

FabriCool is an advanced insulated packaging material specially designed to protect air cargo shipments against extreme ambient conditions. Made using a combination of a tough metalized outer layer and an internal fabric layer, FabriCool provides effective temperature control, while also allowing the contents to breathe to avoid build-up of condensation.

FabriCool Air Cargo Covers provide the perfect solution for any airline, perishables distributor or 3PL seeking a reliable method to protect their products during air transit.

FEATURES

Proven to protect against extreme ambient temperatures during loading and in transit

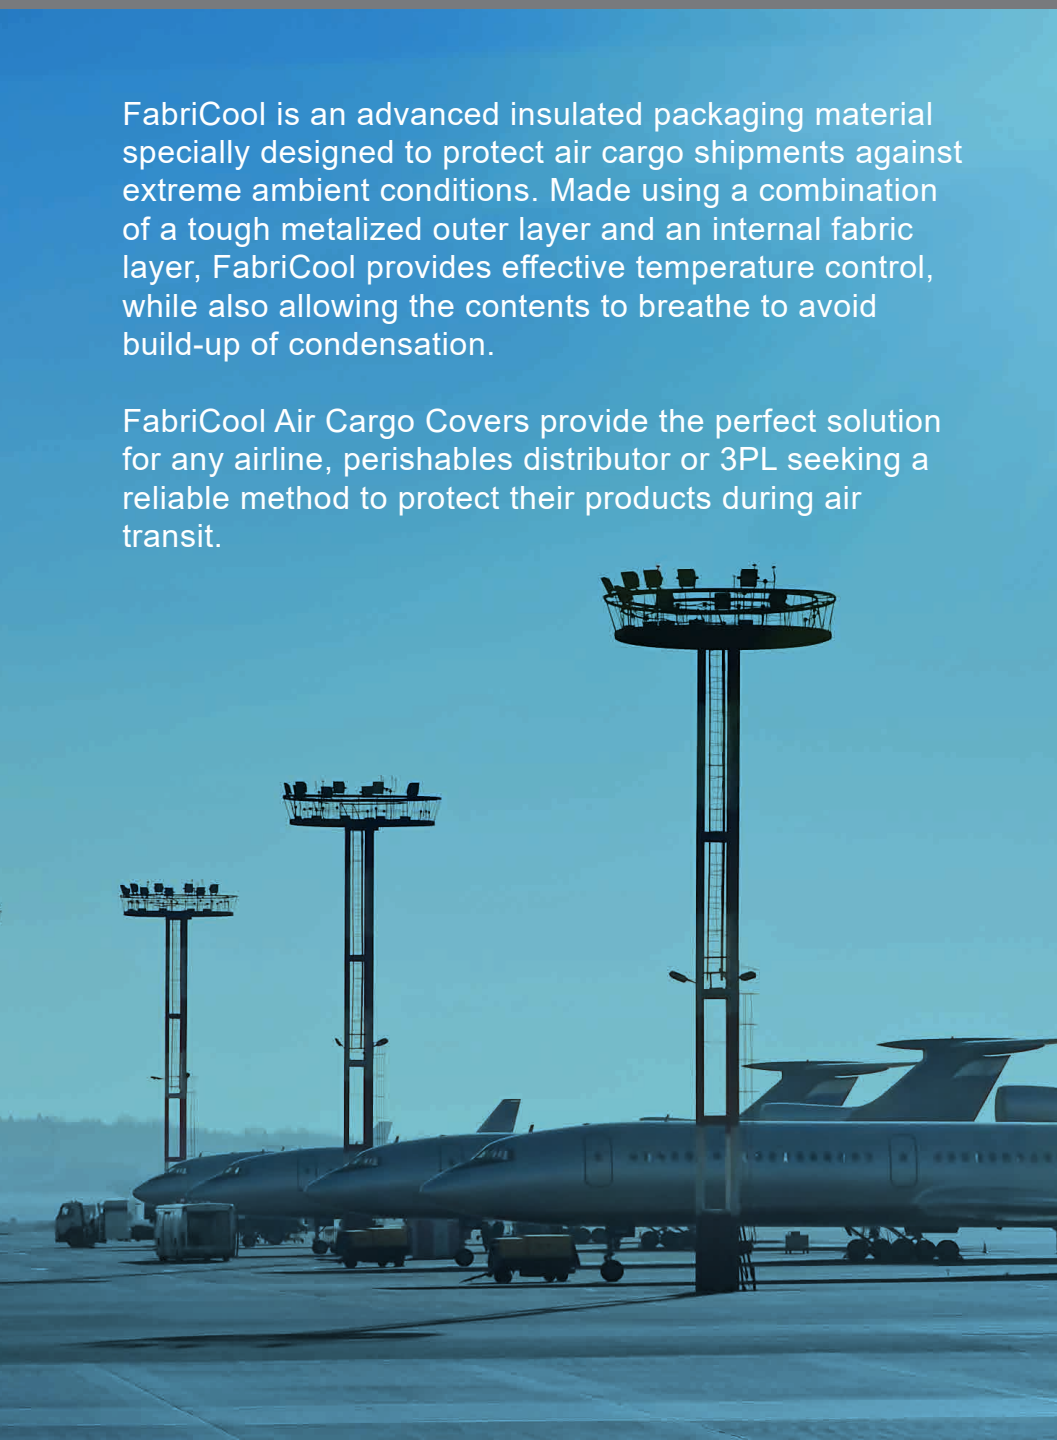

Lined with a breathable fabric material that provides cushioning and minimizes build-up of condensation

Built with a tough metalized exterior that prevents tears while providing protection against extreme weather conditions

Available in custom sizes to suit your exact requirements
